Supplementary Table 2: Sensitivity to alternate start and end dates. Values in the table correspond to six-month averages of the first half of the respective start and end year. The “number of countries” column refers to the number of countries with non-missing gasoline price data for both the start date and the end date. The first row presents values for timeframe included in the main text. SP stands for “start-point”, EP stands for “end-point”, and WM stands for “weighted-mean”.

Start year	End year	Number of countries	SP mean tax	EP mean tax	CAGR mean tax	SP WM tax	EP WM tax	CAGR WM tax	SP % benchmark	EP % benchmark	SP WM % benchmark	EP WM % benchmark	Countries with rising taxes (%)
2003	2015	129	42.8	50.9	1.44	27.9	24.2	-1.18	210.0	191.6	171.6	143.6	64.3
2001	2015	115	43.9	51.8	1.39	25.5	20.1	-1.97	213.3	193.2	165.7	136.3	69.6
2005	2015	138	47.7	51.2	0.59	29.1	25.0	-1.25	190.2	192.2	154.9	145.0	55.8
2001	2013	120	42.8	51.0	1.46	25.6	18.0	-2.88	210.5	157.2	165.9	120.4	65.8
2003	2013	134	42.0	49.8	1.43	28.0	22.5	-1.81	207.8	155.9	171.8	125.3	59.7
2005	2013	143	46.8	50.8	0.68	29.2	23.6	-1.74	188.4	157.0	155.1	126.6	58.0
2001	2011	120	42.8	51.7	1.59	25.6	20.7	-1.76	210.5	156.9	165.9	122.8	65.8

2005	2011	143	46.8	51.5	0.80	29.2	26.6	-0.76	188.4	156.7	155.1	129.4	59.4

Supplementary Notes

Supplementary Note 1: Top gasoline consumers

Using a list based on the top 20 gasoline consumers, Supplementary Figure 1 shows a comparison of retail gasoline prices in 2015 versus the change in gasoline consumption from 2003 to 2012, in thousands of barrels per day (note that 2012 is the latest year in which the EIA provides annual gasoline consumption data by country). With the exception of the United States, countries in which gasoline consumption has declined tend to have the highest gasoline prices (France, Germany, Italy, UK). With the exception of South Korea, countries in which gasoline consumption has increased tend to have relatively low gasoline prices. Among these latter fourteen countries, five are persistent subsidizers while five have prices within \$1/L of the benchmark average.

Supplementary Note 2: Alternate benchmark

Our main findings are robust to the use of an alternative benchmark: over-time changes in net implicit taxes in both absolute and *ad valorem* terms are substantively similar when employing different pre-tax gasoline benchmark prices. This is primarily due to the high correlation in changes over time across different raw supply costs (different crude oil blends) and across different marginal costs (different refining margins).

As an alternate benchmark, we use a WTI-based blend of gasoline — as opposed to a Brent-based blend, as used in the main text — using the spot price for conventional refined gasoline along the U.S. Gulf Coast as reported by the EIA. This refers to spot contracts for delivery of refined gasoline in any port city along the coastline of Texas and Louisiana.

Implicit taxes in terms of the difference between local price and a supply cost based on a WTI-based blend of gasoline have increased 22.5% from the first half of 2003 to the first half of 2015, but have decreased 7.4% or a CAGR of -0.6% when weighted by gasoline consumption share. The WTI-based benchmark increased 38.3% during this period. Supplementary Figure 3 shows the

global mean tax over time using this alternative benchmark.

Taxes as a percentage of supply cost using a WTI-based blend have declined from 210% in the first half of 2003 to 198% in the first half of 2015. If prices are weighted by gasoline consumption share, implicit taxes as a percentage of supply cost have declined from 172% in the first half of 2003 to 149% in the first half of 2015, a CAGR decline of 1.2%. Supplementary Figure 4 shows the global mean tax as a percentage of supply cost over time using this alternative benchmark (compared to Supplementary Figure 2, which shows the tax as a percentage of the Brent-based blend used in the main text).

The list of persistent subsidizers in the main text also remains unchanged when using a WTI-based blend of gasoline instead of a Brent-based blend.
